

What Needs Improvement

1. Inventory Management (Highest Priority)

- ✓ Stock In
- ✓ Stock Out
- ✓ Purchase Orders
- ✓ Supplier Management
- ✓ Barcode Printing
- ✓ Expiry Dates
- ✓ Batch Numbers
- ✓ Low Stock Alerts
- ✓ Automatic Reorder Levels

These are either missing or not sufficiently visible.

2. Barcode Support

Needs:

- Barcode scanner support
- Barcode generator
- Barcode printing
- Scan-to-search
- Scan during checkout

Without these, cashier operations are slower

3. Sales Screen

The sales interface should support:

- Touch screen
- Keyboard shortcuts
- Barcode scanner
- Quantity editing
- Discount
- Tax
- Hold Sale
- Resume Sale
- Park Order
- Split Bill
- Multiple Payments

4. Customer Management

Needs:

- Customer database
- Loyalty points
- Customer balance
- Credit sales
- Customer purchase history
- Birthday rewards

5. Supplier Module

Missing:

- Supplier profiles
 - Purchase history
 - Outstanding balances
 - Supplier payments
 - Purchase invoices
-

6. Employee Module

Needs:

- Staff accounts
 - Roles
 - Permissions
 - Cashier login
 - Attendance
 - Shift management
 - Commission tracking
-

7. Reports

Reports should include:

- Daily Sales
 - Monthly Sales
 - Annual Sales
 - Profit Report
 - Cash Flow
 - Expenses
 - Best-selling Items
 - Dead Stock
 - Inventory Valuation
 - VAT/Tax Report
 - Customer Report
 - Supplier Report
-

8. Receipt Design

Needs:

- Company logo
- QR Code
- Barcode
- Tax number
- Return policy
- Custom footer
- Thermal printer support

9. Payment Methods

Should support:

- Cash
 - Card
 - Mobile Money
 - Mixed Payment
 - Credit
 - Bank Transfer
-

10. Expense Module

Should allow recording:

- Electricity
- Rent
- Salaries
- Fuel
- Internet
- Repairs

These expenses should be reflected in profit calculations.

11. Multi-user Permissions

Needs role-based access such as:

- Super Admin
- Manager
- Cashier
- Accountant
- Store Keeper
- THAT ALLOW MULT USER TO LOG IN IN DIFFERENT DEVICES AT THE SAME TIME

Each role should have appropriate permissions.

12. Audit Log

Every important action should be tracked:

- Who logged in
- Who edited products
- Who changed prices
- Who deleted invoices
- Who refunded sales

This is essential for accountability.

13. Backup & Restore

A commercial POS should support:

- Automatic backup
 - Cloud backup
 - Manual backup
 - Restore functionality
-

14. Offline Mode

If the internet is unavailable:

- Continue making sales
- Store data locally
- Sync automatically when online

Offline capability is a key feature of robust cloud POS platforms.

15. Dashboard Analytics

Add charts for:

- Daily sales
 - Monthly sales
 - Profit trends
 - Top products
 - Category sales
 - Revenue growth
-

Features That Should Be Add

- Gift Cards
 - Coupon System
 - WhatsApp Receipt Sending
 - SMS Notifications
 - Email Receipts
 - Warehouse Management
 - Purchase Orders
 - Returns & Refunds
 - Stock Transfers
 - Accounting Module
 - Financial Statements
 - QR Code Payments
 - Delivery Management
 - PWA (installable web app) IF POSSIBLE
 - Dark/Light Theme
 - Multi-language support
 - Multi-currency support
-

Possible Issues

Without testing authenticated functionality directly, common areas to verify include:

- Product creation and editing
- Product deletion
- Search and filtering
- Pagination with many products
- Form validation

- Duplicate product prevention
- Image upload
- Stock updates after sales
- Invoice generation
- Receipt printing
- Session timeout
- Role-based authorization
- Error handling for failed network requests

I would recommend expanding it into a full commercial system with:

- Complete Inventory Management
- Multi-Branch Support
- Customer & Supplier Management
- Barcode & QR Code Support
- Sales Analytics Dashboard
- Financial Accounting
- Expense Tracking
- Offline Capability
- Thermal Printer Support
- Receipt Customization
- Cash Drawer Integration
- Role-Based Security
- Automatic Backup
- Export to PDF and Excel
